IMPORTANT NOTICE

This presentation has been prepared by OZ Minerals Limited ("OZ Minerals") and consists of written materials/slides for a presentation concerning OZ Minerals. By reviewing/attending this presentation, you agree to be bound by the following conditions.

No representation or warranty, express or implied, is made as to the fairness, accuracy, or completeness of the information, contained in the presentation or of the views, opinions and conclusions contained in this material. To the maximum extent permitted by law, OZ Minerals and its related bodies corporate and affiliates, and its respective directors, officers, employees, agents and advisers disclaim any liability (including, without limitation any liability arising from fault or negligence) for any loss or damage arising from any use of this material or its contents, including any error or omission there from, or otherwise arising in connection with it.

Some statements in this presentation are forward-looking statements within the meaning of the US securities laws. Such statements include, but are not limited to, statements with regard to capacity, future production and grades, projections for sales growth, estimated revenues and reserves, targets for cost savings, the construction cost of new projects, projected capital expenditures, the timing of new projects, future cash flow and debt levels, the outlook for minerals and metals prices, the outlook for economic recovery and trends in the trading environment and may be (but are not necessarily) identified by the use of phrases such as “will”, “expect”, “anticipate”, “believe” and “envisage”. By their nature, forward-looking statements involve risk and uncertainty because they relate to events and depend on circumstances that will occur in the future and may be outside OZ Mineral’s control. Actual results and developments may differ materially from those expressed or implied in such statements because of a number of factors, including levels of demand and market prices, the ability to produce and transport products profitably, the impact of foreign currency exchange rates on market prices and operating costs, operational problems, political uncertainty and economic conditions in relevant areas of the world, the actions of competitors, activities by governmental authorities such as changes in taxation or regulation.

Given these risks and uncertainties, undue reliance should not be placed on forward-looking statements which speak only as at the date of the presentation. Subject to any continuing obligations under applicable law or any relevant stock exchange listing rules, OZ Minerals does not undertake any obligation to publicly release any updates or revisions to any forward looking statements contained in this presentation, whether as a result of any change in OZ Minerals expectations in relation to them, or any change in events, conditions or circumstances on which any such statement is based.

Certain statistical and other information included in this presentation is sourced from publicly available third party sources and has not been independently verified.

All figures are expressed in US$ unless stated otherwise.
HIGHLIGHTS – SOLID PRODUCTION, DIFFICULT MACRO ENVIRONMENT

> Prominent Hill construction essentially complete. Initial production due mid February. Excellent exploration results both along strike and at depth.

> Production: Sepon copper and Golden Grove zinc very strong for the year. Other operations solid.

> Dramatic fall in commodity prices forced the delay/closure of a number of advanced projects including Dugald River, Avebury, Martabe, Sepon Copper expansion.

> Re-financing activities rapidly progressing with a number of options aimed at consolidating the balance sheet.
> Total recordable injury rate down from 7.8 (Q3) to 7.3 (Q4). Continued focus on safety regardless of economic downturn.

> Five significant environmental incidents:

• Century port facility in Karumba, EPA concerns regarding dust management and air monitoring. **Action taken:** air emissions specialist engaged to review the monitoring programme.

• Three elevated concentration discharges of cadmium in mine water. **Action taken:** upgrade of the mine water treatment system underway.

• Chemical flow into underground workings at Golden Grove. **Action taken:** no effect on the quality of mine water discharge, continue to monitor.

Century: Steady Zn production but decline in waste expense due to natural decline, deferral of 8m BCM into future years and greater in pit dumping.

Sepon Copper: installation of second autoclave reduces operating risk resulting in increase to forecast production.

Sepon Gold: production holding up well with steady grades assisted by higher gold price albeit declining mine life.

Rosebery: steady production forecast.

Avebury: final production in Q1.

Prominent Hill: initial production in Q1.

Overall Construction

97% complete

Construction of the plant and infrastructure is essentially complete with only minor small bore pipe work and electrical and instrumentation works to complete.

Pre-commissioning of the crusher and grinding mills is now complete.

Load commissioning of the grinding circuit including ball and SAG mills, rougher flotation cells, thickener and tailings system has commenced.

The reagent and flotation sections about to undergo pre-commissioning activities.

Milling of ore to commence February 2009.

First concentrate production expected mid February.

AGGRESSIVE RESPONSE TO LOWER COMMODITY PRICES

Following the dramatic slump in commodity prices, the following actions were taken during the quarter and January 2009:

- Suspension of the Martabe gold silver project in Indonesia;
- Suspension of the Sepon copper expansion;
- Deferral of surface facility renewal at Rosebery;
- Scuddles on care and maintenance and delayed the open pit copper at Golden Grove;
- Deferral of the Izok Lake and High Lake Feasibility Study in Canada;
- Deferral of the Dugald River project;
- Closure of Martabe;
- Avebury on care and maintenance;
- Significant reduction in greenfields exploration, concentration on near mine;
- Implemented a significant operating cost reduction program;
- 17% workforce reduction since November, 2008.
> Significant progress continues to be made with the various banking syndicates.

> Goal is still to have a resolution by the end of February.

> Concurrent with this, there has been significant interest in the assets of the company from mining companies, financial institutions and customers.

> Other funding initiatives also being considered.

> Updates will be made on all the above on an ongoing basis.
MARKET OUTLOOK

> Significant price declines have been met with escalating mine closures, project deferrals and explorations cuts. All of which will lead to supply constraints when demand picks up.

> Short term: slower demand. Financial markets and technical factors have limited the upside.

> LME stocks have increased due to consumer end of year de-stocking, early Chinese new year and lower demand.

> Treatment charges appear to have been settled at $75/7.5c for copper for 2009. Cathode premiums have fallen along with contract demand.

> Freight rates have continued to decline on the back of lower demand and an easing in oil prices. Spot sea freight rates fallen around 90% since peaking in May.
